Hanwell EMS

Comprehensive Software Platform

EMS is a leading edge software platform that combines and supersedes Synergy and Notion Pro onto a single integrated software solution.

EMS is a scalable and offers a contemporary browserbased user interface. This enables the data from both Hanwell Pro and Hanwell IceSpy hardware to be seamlessly fed into one system, providing an industry leading software and hardware combination.

Historical data

Scheduling

RAG

Alarms

Developed to give maximum flexibility and control of data and events, EMS has made significant advances in how, where and when data can be viewed and managed across the widest spectrum of customers from the single site/single user through to multiple site/multiple user situations. EMS also has both standard and bespoke reporting options to meet the simplest and most complex customer requirements.

Allows flexible grouping of sensors to

customise views even across multiple

including email and SMS notifications,

Full history of recorded data available for

Variety of alarm features available

analysis by users at all times

Export data files to CSV formats

Automated reporting directly to PDF

Interactive graphical and tabular data

format at user defined timescales

Various software installation

configurations available

including mobile app

sites

Software Features & Benefits

- Browser based technology with SQL database
- Top level pictorial overview of site activity and alarms on start up
- Devices can be added at will with no interruption to logging
- User access management and control via simple permissions process
- Seamlessly supports multiple geographical locations
- Easy navigation to alarms, reporting tools • and administration areas
- Easy access to historical data •
- Supports all Hanwell Pro & Hanwell IceSpy current and future hardware
- Option to design additional bespoke reports

Ultimate peace of mind

Version 1 - EC180021

N MADE IN BRITAIN

- Simple to use and manage providing instant alarm notification to relevant personnel
- Assists with national regulatory compliance such as MRHA and 21 CFR Part 11
- Frees up staff time and eliminates errors by removing manual checking processes
- Improves speed of preventative action with immediate email and SMS alarms
- Generates a complete environmental monitoring solution for multiple parameters in multiple locations
- Easily expandable/changeable system as and when required with minimal disruption
- Post purchase support available
- Integration of data from handheld and data logging devices, creating centralised and paperless monitoring.

Hanwell

OVERVIEW

Overview provides users with an overview of overall system status, while the dashboard can be customised per user.

GRAPHICAL VIEW

Graphical View provides line graphs with optional door position indicator, alarm level indication. Data overlays, zoom plus many more features.

Add-ons

EMS has been developed to accept future application specific software developed by Hanwell. Ask for details or view our datasheets for:

- Mobile application view and acknowledge alarms from any smart phone
- Selsium software hospital ward temperature monitoring

Schematic A Al system componenets would be installed in the same physical location.

User PC

Software configuration

EMS is a very flexible platform, unlike many of our competitors, we are not restricted to either cloud or server-based configuration. For full flexibility the software can be installed in five different ways:

- 1. On a standalone computer, with no internet access
- 2. On a standalone computer, with internet access
- 3. On a LAN with no internet access
- 4. On a LAN or intranet with internet access
- 5. On a cloud platform

Part numbers

For further flexibility, the system components can be separated, for example the database could be installed on an existing SQL server located remotely to the services part of the software with the base stations in a different location again.

Schematic B

Shows how the system components could all be located in different geographic locations using a server and SQL connected via secure connection, e.g. intranet/VPN
